Education

Arizona State University - Tempe, Arizona, USA **CGPA 4.0/4.0** May 2023

- Master's in Computer Science.

Dhirubhai Ambani Institute of ICT - Gandhinagar, Gujarat, India **CGPA 8.1/10** May 2019

- Bachelor's in Information and Communication Technology.

Work Experience

Software Engineer III, Stride, Walmart Global Tech – Bentonville, AR, USA 06/26/2023 – Present

- Primary work was in Backend Java and SpringBoot to build new scalable features/endpoints and deploy them in a CI/CD-based pipeline for the Stride Inbound software, which primarily deals with hauling loads for Walmart DCs.
- **Tech Stack**: Java, SpringBoot, Kafka, Azure Cosmos, Microsoft SQL Server & Kubernetes.

Software Engineer Intern, Yard Management System, Walmart Global Tech – Bentonville, AR, USA 05/31/2022 – 08/12/2022

- **Yard Management System API Feature Building & Automation: T**he primary work involved developing new features in the backend using Java and Spring Boot, and deploying them in a CI/CD-based pipeline for the YMS software. I also worked on a project that was aimed at automating the YMS Software's API calls as they scale to different warehouses of Walmart.
- **Tech Stack**: Java, SpringBoot.

Data Engineer, Artificial Intelligence Team, Verse Innovation – India 01/02/2019 – 04/31/2021

- I developed a project focused on clustering news articles in various languages using NLP algorithms, involving the construction of data pipelines with PySpark and Hadoop to support analytics and feedback for an ML model. Additionally, I created a semi-named-entity recognizer and word stemmer for Indic languages using statistical methods and GloVe embeddings. I also prototyped several small-scale time series and prediction models. Furthermore, in collaboration with business analysts and product managers, I analyzed the performance of news publishers' articles on the Dailyhunt Platform, assessing their impact on views through metrics like churn, text quality, content reach, click rate, bounce rate, and notification rate, as requested by client publishers.
- **Tech Stack**: Python, PySpark, Spark, Hadoop, Keras, Flask, Linux.

Academic Projects

Gait Analysis and Prediction **Research Intern, DA-IICT**

As a part of the research team under Dr. Kalyan Sasidhar (faculty at DA-IICT), the team worked on modeling the human gait. Our project aimed to use these findings and try to identify the onset of medical conditions in elderly people using ML. **Technologies**: *Python, Numpy, Scipy, Prophet, ARIMA, Timeseries.*

Android App for Monitoring Covid Symptoms and Biometric Liveness **Arizona State University**

Details: I built an Android application that was used for logging the COVID-19 symptoms of patients. Apart from logging the data in a database, it could also calculate the heart and breathing rates of the patient. **Technologies**: *Android, SQL, Flask*

Details: I built an Android application that was used for logging the EEG waves of patients. Using Machine Learning techniques, the app will then detect if the brain waves are normal or abnormal. I used a wide range of methods and did a thorough analysis of the efficacy of each method. **Technologies**: *Android, Keras, Flask, Scipy, Sklearn*.

Skills and Tools

Languages - Python, Java, SQL, Bash.

Libraries & Framework - Hadoop, SpringBoot, Matplotlib, PySpark, Spark, Flask, Kubernetes, Pandas, Numpy, Scipy, Kafka.

Database - Microsoft SQL, MongoDB, Azure Cosmos DB, Postgres DB.

Application Software - Visual Studio, JetBrains IntelliJ, Py-Charm, Android Studio, Jupyter Notebook.

Tools - GitHub, Postman, Salesforce, and ServiceNow.

Concepts And Relevant Course Work - Object-Oriented Programming, Data Structures & Algorithms, Database Management, Computer Networks, Operating Systems, Data Mining, Software Engineering, Signal Processing, Introduction to Deep Learning, Mobile Computing, Software Requirements Specifications, Distributed Database Systems, Natural Language Processing Advanced.

Other Extracurriculars

- **IEEE Summer Workshop Tutor (DAIICT)**: Tutor for Machine learning workshop held during Tech Fest
- **ASU SCAP Hackathon Winne**r: My team worked on building a simple website that enabled tech suite booking at the Starbucks location. I worked primarily on the backend server and ML predictions.
